# 2014 GLOBAL INVESTOR STATEMENT ON CLIMATE CHANGE

**This statement is signed by 348 investors representing more than US \$24 trillion in assets.**

We, the institutional investors that are signatories to this Statement, are acutely aware of the risks climate change presents to our investments. In addition, we recognise that significant capital will be needed to finance the transition to a low carbon economy and to enable society to adapt to the physical impacts of climate change.

We are particularly concerned that gaps, weaknesses and delays in climate change and clean energy policies will increase the risks to our investments as a result of the physical impacts of climate change, and will increase the likelihood that more radical policy measures will be required to reduce greenhouse gas emissions. In turn, this could jeopardise the investments and retirement savings of millions of citizens.

There is a significant gap between the amount of capital that will be required to finance the transition to a low carbon and climate resilient economy and the amount currently being invested. For example, while current investments in clean energy alone are approximately \$250 billion per year, the International Energy Agency has estimated that limiting the increase in global temperature to two degrees Celsius above pre-industrial levels requires average additional investments in clean energy of at least \$1 trillion per year between now and 2050.

This Statement sets out the contribution that we as investors can make to increasing low carbon and climate resilient investments. It offers practical proposals on how our contribution may be accelerated and increased through appropriate government action.

Stronger political leadership and more ambitious policies are needed in order for us to scale up our investments. We believe that well designed and implemented policies would encourage us to invest significantly more in areas such as renewable energy, energy efficiency, sustainable land use and climate resilient development, thereby benefitting our clients and beneficiaries, and society as a whole.

## HOW WE CAN CONTRIBUTE

As institutional investors and consistent with our fiduciary duty to our beneficiaries, we will:

- **Work with policy makers** to support and inform their efforts to develop and implement policy measures that encourage capital deployment at scale to finance the transition to a low carbon economy and encourage investment in climate change adaptation.
- **Identify and evaluate low carbon investment opportunities** that meet our investment criteria and consider investment vehicles that invest in low carbon assets subject to our risk and return objectives.
- **Develop our capacity to assess the risks and opportunities** presented by climate change and climate policy to our investment portfolios, and integrate, where appropriate, this information into our investment decisions.
- **Work with the companies in which we invest** to ensure that they are minimising and disclosing the risks and maximising the opportunities presented by climate change and climate policy.
- **Continue to report** on the actions we have taken and the progress we have made in addressing climate risk and investing in areas such as renewable energy, energy efficiency and climate change adaptation.

## SCALING UP INVESTMENT: THE NEED FOR POLICY ACTION

We call on governments to develop an ambitious global agreement on climate change by the end of 2015. This would give investors the confidence to support and accelerate the investments in low carbon technologies, in energy efficiency and in climate change adaptation.

Ultimately, in order to deliver real changes in investment flows, international policy commitments need to be implemented into national laws and regulations. These policies must provide appropriate incentives to invest, be of adequate duration to improve certainty to investors in long-term infrastructure investments and avoid retroactive impact on existing investments.

We, therefore, call on governments to:

- **Provide** stable, reliable and economically meaningful carbon pricing that helps redirect investment commensurate with the scale of the climate change challenge.
- **Strengthen** regulatory support for energy efficiency and renewable energy, where this is needed to facilitate deployment.
- **Support** innovation in and deployment of low carbon technologies, including financing clean energy research and development.
- **Develop** plans to phase out subsidies for fossil fuels.
- **Ensure** that national adaptation strategies are structured to deliver investment.
- **Consider** the effect of unintended constraints from financial regulations on investments in low carbon technologies and in climate resilience.

---

### ABOUT AIGCC

The Asia Investor Group on Climate Change (AIGCC) is an initiative set up by the Association for Sustainable and Responsible Investment in Asia (ASRIA) to create awareness among Asia's asset owners and financial institutions about the risks and opportunities associated with climate change and low carbon investing. AIGCC provides capacity for investors to share best practice and to collaborate on investment activity, credit analysis, risk management, engagement and policy. With a strong international profile and significant network, including pension, sovereign wealth funds insurance companies and fund managers, AIGCC represents the Asian voice in the evolving global discussions on climate change and the transition to a greener economy. Visit <http://aigcc.asia.org/>.

### ABOUT IGCC

IGCC is a collaboration of 52 Australian and New Zealand institutional investors and advisors, managing approximately \$1 trillion and focussing on the impact that climate change has on the financial value of investments. The IGCC aims to encourage government policies and investment practices that address the risks and opportunities of climate change, for the ultimate benefit of superannuants and unit holders. Visit [www.igcc.org.au](http://www.igcc.org.au).

### ABOUT IIGCC

The Institutional Investors Group on Climate Change (IIGCC) is a forum for collaboration on climate change for investors. IIGCC's network includes over 90 members, with some of the largest pension funds and asset managers in Europe, representing €7.5trillion in assets. IIGCC's mission is to provide investors a common voice to encourage public policies, investment practices and corporate behaviour which address long-term risks and opportunities associated with climate change. Visit [www.iigcc.org](http://www.iigcc.org).

### ABOUT INCR

The Investor Network on Climate Risk (INCR) is a North America-focused network of institutional investors dedicated to addressing the financial risks and investment opportunities posed by climate change and other sustainability challenges. INCR currently has more than 100 members representing over \$13 trillion in assets. INCR is a project of Ceres, a nonprofit advocate for sustainability leadership that mobilises investors, companies and public interest groups to accelerate and expand the adoption of sustainable business practices and solutions to build a healthy global economy. Visit [www.ceres.org](http://www.ceres.org).

### ABOUT PRI

The United Nations-supported Principles for Responsible Investment (PRI) Initiative is an international network of investors working together to put the six Principles for Responsible Investment into practice. Its goal is to understand the implications of Environmental, Social and Governance issues (ESG) for investors and support signatories to incorporate these issues into their investment decision making and ownership practices. In implementing the Principles, signatories contribute to the development of a more sustainable global financial system. Visit [www.unpri.org](http://www.unpri.org).

### ABOUT UNEP FI

UNEP FI is a global partnership between UNEP and the financial sector. Over 200 institutions, including banks, insurers and fund managers, work with UNEP to understand the impacts of environmental and social considerations on financial performance. Through its Climate Change Advisory Group (CCAG), UNEP FI aims to understand the roles, potentials and needs of the finance sector in addressing climate change, and to advance the integration of climate change factors - both risks and opportunities - into financial decision-making. Visit [www.unepfi.org](http://www.unepfi.org).

---

### ACKNOWLEDGMENTS

The sponsoring organisations thank CDP for its support of the statement. CDP is an international, not-for-profit organisation providing the only global system for companies and cities to measure, disclose, manage and share vital environmental information ([www.cdp.net](http://www.cdp.net)).
